Title:
Authors:
Year:

1. What is the ML application? [Slide 3]

2. What type of problem is it (i.e. classification or regression)?

   What type of model is this (i.e. NN, CNN, LSTM etc.)?
   a. Bonus: Why do you think they chose this model type?

3. What are the inputs and outputs? What is their structure (i.e. maps, timeseries, data points)? What are the data sources?

4. What is the timescale (i.e. Δt between inputs and outputs)?

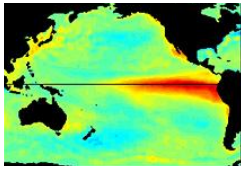
5. What type of challenges and solutions were faced or applied? [Slide 4]

ML Applications (Q1)

Sources of Predictability

Climate Modes

Causal analysis



Feature Detection

Extremes

Pattern Recognition

Forecasting

Short-term weather forecasting

Extreme Weather Events

Climate Forecasting

Satellite Data & Observations

Interpolation

Global Reconstruction

Variable Representation

Downscaling

Merging Satellite Data

Synthetic data

Sensor placement

Earth System Modeling

Emulators

Model Calibration and Validation

Equation Discovery

Uncertainty Quantification

Sources of uncertainty

Parameterizations

Bias Correction

Data Assimilation

Climate Model analysis and benchmarking

Challenges and Solutions (Q5)

Challenges	Solutions
Data Availability	Climate model output
Robustness on out-of-distribution samples	Transfer learning
Interpretability	eXplainable AI
Physical Inconsistency	Physics-informed ML
Uncertainty Quantification	BNNs, Ensembles, Dropout, etc.
